

GTRx Saves Client \$36,000 on Entyvio Every 6 Weeks

Solving the Dual Challenge of Cost Containment & Patient Comfort

The Challenge

Entyvio, a specialty treatment for those living with ulcerative colitis or Crohn's disease, poses a dual challenge for payors and employers: balancing cost containment with patient comfort. Entyvio use is prevalent, and the medication is often marked up significantly. It is essential to manage expenses and maintain patient comfort during infusion sessions to ensure they will continue to seek care.

The Solution

GTRx Specialty Pharmacy NetworkSM helps employers with Entyvio patients save money by procuring doses of the drug at a reduced rate through preferred sourcing. Plus, our site-of-care program lets patients receive treatment in the comfort of their own homes, eliminating provider markups, limiting supply chain issues, and encouraging treatment adherence.

The Result

GTRx helped a client with an employee on Entyvio save an average of **\$36,000 every six weeks.**

Next Steps

Are your groups struggling to support employees with specialty medication needs? **We're here to help.**
