

GTRx Offers Sustained Cost Containment:

One Client Saved \$15k+ Every 4 Weeks

With Gammagard Home Infusions

The Challenge

High allocation prices for Gammagard infusion treatments are negatively impacting Third-Party Administrators (TPAs), employers, and patients, imposing financial hardships all around. Patients also face disruptions in their day-to-day lives when they are forced to leave their homes and go to an outpatient facility to obtain care.

The Solution

GTRx Specialty Pharmacy NetworkSM sources specialty medications directly and offer home infusion treatments, ensuring greater patient comfort and eliminating provider markups.

The Result

This client saved, **on average, \$15,500 every four weeks** on Gammagard treatment for its employees. For long-term patients, this translates to sustained cost containment that positively impacts payors' and patients' medical spending.
