

CASE STUDY HIGHLIGHT

GTRx Saves Client \$30,100 on Keytruda Case

The Challenge

High-dollar claims associated with Keytruda, an immunotherapy cancer treatment, spell trouble for Third-Party Administrators (TPA), other payors, and employees due to rising procurement costs and supply chain issues. Plus, buy and bill pharmaceutical models are unpredictable and often lead to payors and self-funded employer groups paying more than they have to.

The Solution

GTRx Specialty Pharmacy NetworkSM works with providers to help Keytruda patients obtain manageable savings. Doses of the drug are procured at a reduced rate through our white-glove approach to preferred sourcing. Plus, they are shipped directly to the patient's local hospital, limiting supply chain concerns.

The Result

GTRx delivered **\$30,100 in savings every 3 weeks** for a client's plan member receiving Keytruda through preferred sourcing.

Next Steps

It's time to see what GTRx can do for your groups. **Contact us today!**
